

InSoFast®

Engineered Simplicity

Transform your unfinished basement into the **BONUS** living space of your dreams...

INSOFAST PANELS PROVIDE:

A space saving design that will make every room larger.

A more energy efficient and durable wall than a wall built with wood studs and fiberglass insulation.

A safe, clean living environment without the worry of rust, rot, or decay because InSoFast panels are unaffected by moisture.

A sustainable energy choice with 40% recycled content that saves energy year after year.

MAKING HOMES HEALTHY

Easy to Install InSoFast Panels = Fast Installation

1. Apply Adhesive

Screw, nail, or adhere. Bonding with adhesive will not make holes in the foundation. A bead of adhesive can outperform screws spaced 6" apart.

2. Press into Place

This job couldn't get any easier. The self-aligning panels with built-in notches ensure that the studs and panels are in perfect alignment.

3. Run Electrical Wiring

Built-in utility chases make wiring simple. After panels have been installed, cut out for box locations. Simply slide wiring through chases.

4. Fasten Drywall

Co-polymer studs have a holding power for attachment equivalent to that of commercial grade steel studs (20ga) using standard drywall screws.

"The east bay of our shop, referred to as "the igloo" because of the cold wall, is now quite comfortable. The installer, an electrician by trade, took on the project to fill in between electrical jobs. He and my nephew had 1,500 S.F. of walls covered in just over a day."
Greg - Auburn, WA

InSoFast Does It All -- Nothing else even comes close!

-  **Framing Layout**
-  **Drainage Plane**
-  **Self-Aligning Studs**
-  **Electrical Chases**
-  **Continuous Insulation**
-  **Drywall Ready**
-  **Vapor Barrier**

High Performance Continuous Insulation

InSoFast panels are manufactured with closed-cell rigid foam and built-in fully insulated studs providing for the perfect insulation job with no gaps, leaks, or thermal short circuits. According to a DOE study, continuous insulation like the InSoFast wall system outperforms a 2x4 framed wall with R-13 fiberglass insulation by 8%.

Hang TVs & Cabinets

Mounting heavy items such as cabinets or a TV is simple. Just screw to the InSoFast studs then followup with a Tapcon® screw into the concrete. InSoFast walls are solid and don't have hollow cavities like a wood framed wall. This gives you the ability to attach heavy objects between the studs of the InSoFast panel by installing a properly sized anchor into the concrete. Light weight pictures can be hung anywhere.

Hang Pictures

"InSoFast saved me so much time and stress not having to build 2x4 walls everywhere. It's nice not having to worry about wet insulation in the basement anymore. The whole family is enjoying the new space."
Mat - "Sweat Equity" Homeowner
